Key Metrics

Total Revenue — Sum of revenue across all sales transactions. Calculated as quantity sold multiplied by unit price for each transaction line, in USD.

Total Quantity Sold — Total number of product units sold across all transactions.

Transaction Count — Total number of recorded point-of-sale transactions.

Unit Price — Price of a single unit of a product at the time of sale, in USD.

Data Source

All metrics come from the Bright Coffee Shop point-of-sale sales dataset (CSV in the `brightcoffeeshop` Unity Catalog volume), covering transaction-level records with dates, times, store locations, and product details.

Data Fields

Transaction Date — The date a sale occurred. Used for monthly revenue trend analysis.

Store Location — The physical coffee shop branch where the transaction took place.

Product Category — The broad grouping a product belongs to (for example, Coffee, Tea, or Bakery).

Product Type — A more granular product grouping within a category (for example, Gourmet brewed coffee within Coffee).

Product Detail — The specific product or variant sold (for example, Our Old Time Dull Roast).

Transaction ID / Store ID / Product ID — Numeric identifiers linking each sale to a specific transaction, store, and product.
